PROFILE

Third-year Computer Science and Business Systems student with hands-on experience in exploratory data analysis, statistical modelling, and data-driven reporting. Have built and evaluated multiple end-to-end analysis pipelines in Python (Pandas, NumPy, Scikit-learn, Matplotlib) covering data cleaning, EDA, visualization, and model evaluation, and have written schema-grounded SQL across a live multi-table production database. Comfortable presenting findings to stakeholders and translating raw data into clear, actionable insights.

RELEVANT EXPERIENCE

Software Engineering Intern — Supply Chain & Warehouse Management Systems

June 2026

- **Exploratory data analysis:** Explored and validated data across 11 relational tables in a live PostgreSQL warehouse management database, identifying integrity gaps across inbound (ASN), inventory, order, and LPN workflows.
- **Reporting & insights:** Wrote schema-grounded SQL (joins, subqueries, aggregation, triggers) to support inventory accuracy and order-fulfillment reporting, translating raw transactional data into operational insight.
- **Stakeholder presentation:** Prepared and delivered a 19-slide technical review presenting engineering findings and system design to internal stakeholders.

Extension Development Intern — CRM Extension Development

June 2026

- **Data-driven feature scoping:** Evaluated the Zoho Marketplace ecosystem and scoped a new extension concept after confirming no complete competing solution existed, applying market/data research to a product decision.
- **End-to-end delivery:** Designed and shipped a production Zoho CRM–Asana integration; owned requirements gathering, API authentication config, debugging, and testing against live CRM data.
- **Applied OOP/data structures:** Used Lists, Maps, and custom functions to build reusable, modular components rather than one-off scripts.

PROJECTS

- **HR Attrition Prediction Pipeline** — Performed full EDA (missing values, distributions, correlation checks) on the IBM Watson HR dataset (1,470 records), then implemented and compared Logistic Regression, Random Forest, and Gradient Boosting models end to end in Jupyter (preprocessing → modelling → evaluation), identifying Monthly Income, Age, and Total Working Years as top attrition predictors.
- **Customer Churn Prediction** — Built and tuned a Random Forest classifier (~88% accuracy) in Python/Scikit-learn; handled class imbalance with SMOTE, visualized results with Matplotlib, and drove retention-strategy insights from feature-importance analysis.
- **CSV-Based RAG Chatbot** — Built a retrieval-augmented generation system in Python to answer natural-language queries over structured CSV data, combining data parsing with query-driven reporting.

TECHNICAL SKILLS

- **Data & Analysis:** Python (Pandas, NumPy, Scikit-learn, Matplotlib), SQL, PostgreSQL, MySQL, Exploratory Data Analysis, Statistical Modelling
- **Languages (OOP):** Python, Java, C — 1+ year applied experience
- **Core CS:** DSA, REST APIs
- **Tools:** Git & GitHub, Jupyter, Deluge scripting

CERTIFICATIONS

- Machine Learning with Python (V2)
- AI Internship (1-month) — Codec Technologies
